

WHAT IS CLAIMED IS:

*Sub
C1*

1. An automatic planning apparatus, which automatic planning apparatus is connected through a network to at least one client, which client is operated by the user, said automatic planning apparatus comprising:

a questionnaire unit which creates and provides a questionnaire for analyzing the user through said network;

an analysis unit which receives the answers to the questionnaire and analyzes the user based on a predetermined analysis method by considering the answers;

an input unit for inputting the initial conditions required for executing the planning on an event desired by the user; and

a planning unit for forming a schedule for the preparation and execution of the event based on the input initial conditions and the analysis by said analysis unit.

2. The automatic planning apparatus according to claim 1, further comprises a storage unit which stores a planning data on the event produced for each of a plurality of patterns as a classification of the user,

wherein said planning unit recognizes a pattern corresponding to the user based on the analysis by said analysis unit, reads the plan data corresponding to the recognized pattern from said storage unit, and plans the schedule based

the read plan data.

3. The automatic planning apparatus according to claim 1,
wherein said storage unit has stored therein the detailed data
required by the user for preparation and execution of the event,
and said planning unit supplies said detailed data in addition
to the plan data in response to a request from the user.

4. The automatic planning apparatus according to claim 1
10 further comprises a management unit which manages the result
of planning by said planning unit and notifies the user of the
items to be processed by the user in the schedule.

5. The automatic planning apparatus according to claim 1
15 further comprises a receiving unit which receives the
reservation from the user for any items to be reserved
beforehand in the schedule.

6. The automatic planning apparatus according to claim 1
20 further comprises a purchase unit for receiving the request from
the user for purchase of any article or any service to be supplied
available in the schedule.

7. The automatic planning apparatus according to claim 6,
25 further comprises a payment unit for receiving the on-line

payment of the charge which may accrue for the purchase of the article or the service.

8. The automatic planning apparatus according to claim 1,
5 wherein the event is one of various events in life, and said planning unit forms a schedule for the preparation and execution of the various events in life of the user.

Q29
9. A computer readable medium for storing instructions,
10 which when executed by a computer, causes the computer to perform the steps of:
creating and providing a questionnaire to a user for analysis of the user through said network;
analyzing the user based on a predetermined analysis
15 method by considering the answers to the questionnaire;
inputting initial conditions required for executing the planning for an event desired by the user; and
planning a schedule for the preparation and execution of the event based on the input initial conditions and the analysis
20 of the user.

10. An automatic planning apparatus with which a user can plan a desired event, said automatic planning apparatus comprising:
a display unit which displays various data;
25 a questionnaire unit which creates a questionnaire based

on which a predetermined property of the user can be analyzed, and makes said display unit display the questionnaire;

an input with which the user can input the answers to the questionnaire and certain initial conditions required for
5 planning and execution of the desired event;

an analysis unit which receives the answers input by the user with respect to the questions in the questionnaire, and analyzes the predetermined property of the user based on the answers by the user and a predetermined analysis; and

10 a planning unit which receives the initial conditions input by the user and the result of analysis of the predetermined property of the user, and creates a schedule for preparation and execution of the event based on the initial conditions and the result of analysis of the predetermined property of the
15 user.

11. The automatic planning apparatus according to claim 10, wherein at least said display unit and said input unit are provided with a client, and said client is connected with rest
20 of the units through a network.
